PLUGG / MUSIC & CREATORS

Privacy Policy

How Plugg handles personal information and music activity.

VERSION 01 / 22 OCTOBER 2026

Operator: **Atedo (Pirwoth Samuel)**
Pakwach, Uganda
Website: www.plugg.site
Contact: support@plugg.site

Scope. Covers cloud infrastructure, local backups, private Listener data, public Artist profiles, cross-border storage and recommended retention periods.

Prepared as a website publication draft. Have the content and operating procedures reviewed before first publication.

Privacy Policy

Policy version: 22 October 2026 | Effective when first published at www.plugg.site

01 Controller and scope of this policy

Plugg is operated by **Atedo (Pirwoth Samuel)** in Pakwach, Uganda. For inquiries about personal data, contact support@plugg.site. This notice applies to Guests, registered Listeners and registered Artists who use www.plugg.site.

This notice describes the data expected to be processed for Plugg's launch features, as described by its operator. Operations and third-party service settings must match this notice before it is published.

02 Information collected from Guests

A Guest can search, browse and stream without providing a name or registering. Operating the site may produce technical information including IP address, browser and device details, approximate network location, page requests, playback/session events, errors and security signals.

Guest data is used to deliver streams, maintain service reliability, prevent abuse and troubleshoot faults. Plugg does not create a public Guest profile or require an email address merely to play available music.

03 Information collected from Listeners

Listener account data may include display name, email address, account role, age-eligibility confirmation, secure login credentials or password hashes, account settings, playlists, likes, followed artists, saved items and listening history.

Listener profiles are private to their owners. Plugg does not make Listener profile pages publicly discoverable. Other people do not receive access to a Listener's personal listening history merely because they are artists or other account holders.

04 Information collected from Artists

Artist accounts may provide the account holder's name, stage or public artist name, country, genre, biography, images, links, music files, release details, performer and contributor credits, and rights declarations or supporting documentation when necessary.

Artist name, public biography, profile imagery, music and release information are intended to be visible publicly. Identity or licensing evidence, email address and account security information are not displayed as ordinary public profile content.

Creators such as DJs and producers may have public profiles if those roles are introduced later. Future manager profiles, if offered, are intended to remain non-public.

05 Purposes of data use

Plugg uses information as necessary to create and secure accounts, stream music, save Listener choices, provide Artist Dashboard tools, display public artist information, address rights complaints, investigate abuse, maintain uptime and respond to support requests.

Engagement events may be counted or summarized to provide trending sections and aggregate artist metrics. Where recommendations are supported, Plugg may use saved preferences and listening activity to tailor music discovery. We do not publish individual Listener histories to artist dashboards.

06 Legal grounds and user choices

Where required by Ugandan law, Plugg relies on an appropriate basis for processing, including valid consent, provision of a requested service, compliance with legal obligations or other authorized grounds. We will request consent when it is necessary and allow withdrawal where the law provides for it.

Users may manage supported account and privacy settings and can seek access, correction or deletion as outlined below. Some technical records and security processing may be necessary to operate the service or meet legal obligations.

07 Cookies, authentication and tracking

Plugg does not currently plan independent advertising trackers, third-party behavioral analytics or promotional-email campaigns at launch. **Essential authentication, session and security technologies may still be used** by the site and its infrastructure providers, including Cloudflare.

Cookies or similar technologies may support sign-in, site security and playback continuity. If Plugg introduces non-essential analytics, advertising or promotional tracking, it will update this notice and obtain any consent required before the new processing starts.

08 Service providers and disclosure

Plugg currently uses **Cloudflare** for website infrastructure and **Neon** for database services. These providers may process technical or account data as needed to deliver their services, subject to appropriate contractual and security controls.

Plugg does not currently sell users' personal information or provide it to advertisers. It may disclose information to authorized personnel, service providers or competent authorities when lawful and necessary. Future commercial data-sharing practices would require new disclosures and any consent or other legal authorization required at that time.

Where an Artist's profile is public, other users can see the public profile and released content; aggregated music metrics may be displayed without revealing private Listener identities.

09 Where data is processed and stored

Primary database: Neon infrastructure in **Frankfurt, Germany** (AWS region **eu-central-1**). **Local backups:** copies synchronized to a server in **Pakwach, Uganda**, as described by the platform operator.

Cloudflare and other necessary network infrastructure may handle requests or security information in additional locations. Not every network packet or operational record should be assumed to remain in Germany or Uganda.

Because primary account data is stored outside Uganda, Plugg must satisfy Uganda's applicable cross-border processing and safeguarding requirements, including adequate protection or valid consent where required. Hosting geography does not itself establish compliance.

10 Data security and access

Plugg intends to use HTTPS connections, password hashing, role-based access controls, limited staff access, security monitoring and protected backups. Private Listener data, authentication secrets, rights records and operational logs should only be accessible to authorized personnel for legitimate purposes.

No technology removes all risk. If a breach occurs, Plugg will investigate, contain the incident and provide notifications required by applicable law.

11 Recommended data-retention schedule

The following is Plugg's **proposed launch retention schedule**, selected for this policy version. The operator should configure actual deletion, logging and backup systems to match these limits before publishing this policy. Any legally mandated retention or relevant dispute may justify an exception.

Record category	Proposed schedule
Account profile and settings	While the account exists; normally erased or anonymized within 30 days after a valid deletion request, except lawful exceptions.
Listening history and identifiable playback events	Rolling 12 months from the event, unless deleted earlier or needed for a specific lawful purpose.
Routine security and access logs	Up to 90 days, unless a security investigation or law requires longer retention.
Support requests and correspondence	Up to 24 months after the case closes, unless a dispute or law requires longer retention.
Artist licence and rights dispute records	Up to 7 years after the related agreement or matter ends, subject to applicable legal requirements.
Routine backup copies	Rotated and deleted within 90 days in normal operation, subject to justified holds and technical restoration constraints.

At the end of a retention period, information should be securely deleted or de-identified where reasonably practicable.

12 Your rights and account deletion

Subject to Ugandan law, individuals may request access to, correction of or deletion of their data, object to certain processing, or withdraw consent where applicable. To exercise these rights, use the available account settings or write to support@plugg.site. We may verify identity to protect account data.

Account deletion requests are initiated through account settings. Requests may also be supported through the contact address when the account is inaccessible. Some information may be retained for disputes, copyright matters, security or mandatory legal duties.

Users who cannot resolve a complaint directly may contact Uganda's Personal Data Protection Office (PDPO): pdpo.go.ug.

13 Age restrictions

Plugg is intended for people aged **18 years or older**. It does not knowingly offer accounts to minors. If an underage account is identified, Plugg may restrict it and handle its information according to applicable law. An 18+ rule does not eliminate all privacy and data-protection duties.

14 Messages, external links and future services

Plugg may send operational or security-related emails necessary for an account, release or service issue. It does not currently plan promotional-email campaigns or ad-based personalization at launch. If optional marketing is introduced, it will be disclosed and managed under applicable consent and opt-out rules.

Public artist profiles may link to external websites or social pages controlled by other businesses. Plugg does not control those services' separate privacy practices.

Paid subscriptions, artist payouts, advertisements, producer or DJ roles and label or manager services are possible future features, not current commitments. Any new data practices will be documented before rollout.

15 Policy updates and contact

This document is dated **22 October 2026** and becomes effective when published on www.plugg.site. We may revise it as functionality or legal requirements change. Material changes will be communicated when required, and fresh consent will be sought where legally necessary.

Contact: Atedo (Pirwoth Samuel), Pakwach, Uganda. **Support, privacy and copyright:** support@plugg.site. This version is prepared for pre-publication legal and operational review.
